

Flexible Pricing Rate Pilot

Get the rate that lets you shift or automate your energy use based on hourly energy prices

What is the Flexible Pricing Rate Pilot?

A Flexible Pricing rate can lower your electricity costs and promote the use of clean energy.

CPA's Flexible Pricing Rate Pilot, in partnership with Southern California Edison (SCE), allows residents and businesses to save money by shifting their energy use or pre-setting their controls to optimize energy use during the most affordable hours of the day.

How Can a Flexible Pricing Rate Lower Costs?

- 1** **First, you pay your regular monthly bills.**
During the pilot program, you stay on your current rate while a Flexible Price Rate runs in the background.
- 2** **Next, a shadow bill tracks your Flexible Pricing Rate.**
Each month, your energy savings are tracked on a 'shadow bill' that shows your Flexible Rate and potential savings.
- 3** **We compare the two, and you save the difference.**
After 12 months, we'll compare your total regular bills to the Flexible Pricing Rate shadow bills. If the Flexible Price Rate bills are lower, you'll get the difference as a bill credit. If it's more, you won't pay extra.

Explore the Benefits of a Flexible Pricing Rate

Save with Hourly Pricing

Save money by checking price trends up to a day in advance and using energy when it's cleaner and cheaper.

Shift When You Can

With hourly electricity rates you — or your Automated Service Provider (ASP) — can schedule your electricity use for hours with the lowest energy prices.

Savings Are Tracked Automatically

Pay your regular bill as usual, while a Flexible Pricing Rate shadow bill tracks your potential savings every month.

Receive Your Credit

If the Flexible Pricing Rate saved you money, you'll receive a credit or payment at the end of the 12-month period.

Who Can Participate in the Flexible Pricing Rate Pilot?

The pilot is open to both residential and commercial customers seeking a way to reduce their energy costs while supporting clean energy and a more resilient grid. You may use programmable equipment or an Automated Service Provider (ASP) to schedule energy usage during off-peak hours when electricity is most affordable and cleanest.

How to Get Started with the Flexible Pricing Rate Pilot

To opt in to the Flexible Pricing Rate pilot, you must be a Clean Power Alliance residential or commercial customer enrolled in a TOU rate. See below for opt-in instructions and eligibility requirements.

How to opt-In to a Flexible Pricing Rate Pilot

Customers can opt in to a Flexible Pricing Rate by calling SCE to confirm their eligibility: **(800) 655-4555**.

Eligible Time-of-Use (TOU) Rates

TOU-D-PRIME, TOU-D-4, TOU-D-5, TOU-GS-1, TOU-GS-2, TOU-GS-3, TOU-8, TOU-EV-8, TOU-EV-9, TOU-PA-2, TOU-PA-3

Not Eligible

- TOU-EV-7
- Non-TOU rates, legacy rate options (Option A, B, or R), and street/area lighting rates. Note: All currently available non-legacy rate options are eligible, including Option E, Option D, NEM, and SBP.

Eligible Demand Response (DR) Programs

- Peak Management Pricing (PMP) rates
- SCE's Emergency Load Reduction Program (ELRP) Group A (Excludes BIP, API, or SDP aggregators)

Scan a QR code to complete your Flexible Pricing Rate enrollment form. Email your enrollment to the address indicated on the form. CPA and SCE will verify your eligibility and notify you of your enrollment status. See Enrollment Form for additional details on pilot participation requirements.
