2025 HISTORICAL CLEAN POWER ALLIANCE PRODUCT CONTENT LABEL[1]

Clean Power Alliance's (CPA) 100% Green Power product covers 100% of your electricity usage.

The State of California mandates that all utilities meet their Renewable Portfolio Standard (RPS) annual requirement in the goal of increasing statewide renewables. 47% of CPA's 100% Green Power product fulfills this year's CA RPS requirement, with the remaining 53% being voluntarily procured by CPA to advance our clean energy goals. 100% percent of the product's renewable content is Green-e® Energy certified for those Commercial and Industrial customers who have opted into the program.

In 2025, 100% Green Power was made up of the following new renewable resources averaged annually.

Green-e Energy® Certified New[2] Renewables in 100% Green Power				
Resource Type	Voluntary Renewables (Green-e®)	Voluntary Generation Location	Green-e® Energy Eligible State Mandated Renewables (CA RPS)	Green-e® Energy Eligible State Mandated Resource Location
Solar	53%	CA or AZ	47%	CA or AZ
Total Green-e® Energy Certified New Renewables				100%

1. These figures reflect the renewables that we have contracted to provide in 2025.

2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

For comparison, the 2023 average mix of resources supplying Southern California Edison (SCE) includes: Renewable (37.6%), Nuclear (9.1%), Natural Gas (20%), Hydroelectric (4.5%), Other (0.1%) and Unspecified sources of power (28.8%). This resource mix was prepared in accordance with the California Energy Commission Power Source Disclosure program.

The average home in California uses 491 kWh per month. Source: U.S. EIA, 2023

Green-e Energy CERTIFIED

100% Green Power is Green-e® Energy certified and meets the environmental and consumer-protection standards set forth by the nonprofit Center for Resource Solutions. Learn more at www.green-e.org.

The Green-e® Energy Standard requires that renewable electricity and RECs generated in or delivered to California must be matched with greenhouse gas (GHG) emission allowances retired on behalf of the generation. This ensures that California customers are using renewable electricity or RECs that contribute to GHG reductions above and beyond what is required by state regulatory policies. In 2024, the pool of free voluntary allowances from the state's Voluntary Renewable Energy Program (VREP) was depleted, and there is uncertainty around when more allowances will become available. The Green-e® Governance Board has approved a waiver allowing Green-e® certified products with VREP-eligible 2025 supply to not purchase GHG allowances to make up for the lack of free allowances. As a result, California allowances will not be retired on behalf of calendar year 2025 renewable MWh generation provided to Commercial and Industrial customers who have opted into the program, and this product therefore supported compliance with state GHG reduction programs rather than going above and beyond statewide emissions regulations. To learn more about VREP, please visit the California Air Resources Board's website. To learn more about the Green-e® certification program, please visit green-e.org
